A. Company Profile

1. Values

- a. Innovation-driven (berbasis inovasi teknologi)
- b. Integrity, Passion, Precision
- c. Collaboration & Human-centered approach
- d. Professional delivery dengan pendekatan persona

2. Mission

Memberikan solusi teknologi yang aman, scalable, dan future-ready untuk membantu bisnis bertransformasi secara digital.

3. Vision

Menjadi partner terpercaya dalam mendorong transformasi digital yang berkelanjutan di berbagai industri.

4. Additional Information

- a. Berdiri sejak 2019
- b. Fokus pada digital transformation
- c. Memiliki pengalaman project skala nasional (Telkom, Kemenkeu, POLRI, dll)
- d. Memiliki lebih dari 45+ profesional dan puluhan project sukses

B. Project Overview

1. New Website / Redesign?

Redesign website company profile (mengganti tampilan lama agar lebih modern & profesional)

2. Expected Deliverables

- a. Website company profile modern (UI/UX premium)
- b. Responsive design (desktop & mobile)
- c. Copywriting profesional
- d. Integrasi kontak & lead form
- e. SEO basic optimization

3. Tone / Voice

- a. Professional
- b. Modern & tech-savvy
- c. Trustworthy
- d. Corporate namun tetap human-friendly

4. Key Functionalities

- a. Halaman Awal/Home
- b. Company profile (About Us)
- c. Services & Solutions
- d. Projects
- e. Client showcase
- f. Contact form & CTA (Call to Action)
- g. Blog / Insights (opsional untuk SEO)

C. Project Goals

- 1. Meningkatkan kredibilitas perusahaan
- 2. Menarik klien enterprise & B2B
- 3. Menampilkan portfolio dan capability secara jelas
- 4. Mendukung lead generation (form kontak / konsultasi)

D. Target Audience

1. Age

25 – 55 tahun

2. Gender

Semua gender

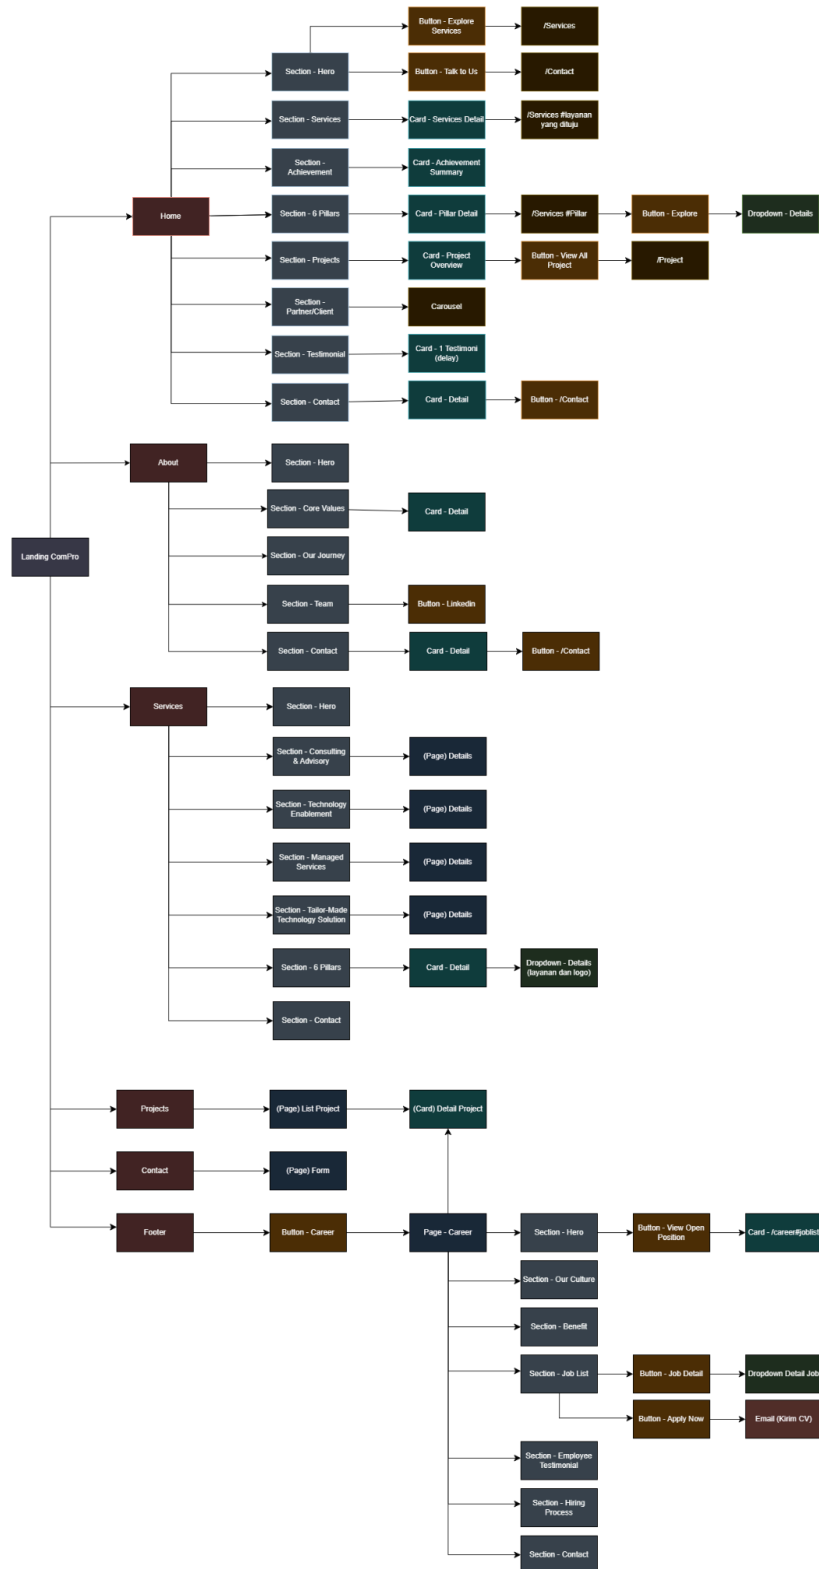

3. Values

- a. Profesional
- b. Berorientasi bisnis & teknologi
- c. Mencari solusi IT terpercaya

4. Additional Information

- a. Perusahaan (B2B)
- b. Instansi pemerintah
- c. Enterprise / korporasi besar
- d. Startup yang membutuhkan solusi IT

Home

Internet of Things

Our platform is designed to support Vertical Applications such as Smart Sensors for Smart Home, Smart Building, Smart Office, Smart Farming and Horizontal Features from various types of business processes.

RADUS has been dedicated as a provider of software infrastructure services, implementation, support and maintenance.

In the following year, RADUS grow into a technology company that developed mobile applications, and continued to provide everything about DevSecOps.

Mobile /Web Application

Radus is a boutique digital transformation consulting that helps established companies revitalize their technology by building digital solutions powered by the latest technology.

DevSecOps

Our Core Services is helping customer to transforming from conventional pipeline development process into DevSecOps framework.

- Implementing DevSecOps Pipeline & platform
- Managing Operation DevSecOps Pipeline & platform
- Enhancing DevSecOps Pipeline & Platform

Our platform is designed to support vertical application stacks for various smart farm scenarios: Smart Farming, Smart Building, Smart Office, Smart Farming and non-farm features from various types of business processes.

What is IoT?

The Internet of Things, or IoT, is a network of physical objects embedded with sensors, software, and network connectivity that enables them to collect and exchange data.

Why does IoT matter?

IoT enables businesses and organizations to gain insights into their operations and processes, leading to improved efficiency, reduced costs, and enhanced customer experiences. IoT also enables businesses to collect and analyze data in real-time, allowing them to make data-driven decisions.

IoT Features

Most of connecting "things" smart objects in IoT applications things of data for remote integration.

It's a cloud where customers provide solutions in terms of integrating devices for any specific needs.

Platform

Any platform is IoT platform is a platform that provides a set of services that enable developers to build IoT applications.

Dashboard

Any dashboard is a web-based interface that provides a visual representation of IoT data. It typically includes charts, graphs, and tables that display real-time data.

API Factory

Any API factory is a platform that provides a set of APIs that enable developers to build IoT applications. It typically includes APIs for device management, data collection, and data analysis.

Pairing Device

Any pairing device is a platform that provides a set of services that enable developers to build IoT applications. It typically includes services for device discovery, authentication, and data collection.

Top Ten IoT Examples

- Connected agriculture
- Smart home security systems
- Industrial monitoring systems
- Smart city infrastructure
- Smart energy management systems
- Smart transportation systems
- Smart retail and marketing

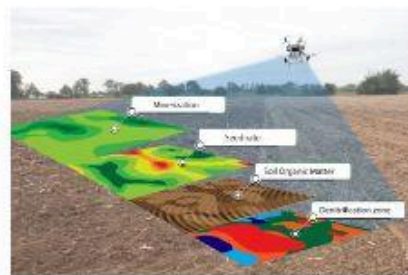

Smart Farming

- Sensors: Soil, water, light, humidity, temperature, etc.
- Software: Data collection, processing, and analysis.
- Connectivity: 4G, 5G, Wi-Fi, etc.
- Location: GPS, etc.
- Analytics: Data analysis, machine learning, etc.
- Data: Analytics, machine learning, etc.

By the right drone for your farming operation

- Drone as a platform: Drone as a platform for various applications like crop monitoring, mapping, etc.
- Drone as a sensor: Drone as a sensor for various applications like crop monitoring, mapping, etc.
- Drone as a camera: Drone as a camera for various applications like crop monitoring, mapping, etc.

- Drone as a sensor: Drone as a sensor for various applications like crop monitoring, mapping, etc.
- Drone as a camera: Drone as a camera for various applications like crop monitoring, mapping, etc.
- Drone as a platform: Drone as a platform for various applications like crop monitoring, mapping, etc.

Smart Office/home

Smart Factory

- Smart Factory: Smart Factory is a platform that provides a set of services that enable developers to build IoT applications.
- Smart Factory: Smart Factory is a platform that provides a set of services that enable developers to build IoT applications.
- Smart Factory: Smart Factory is a platform that provides a set of services that enable developers to build IoT applications.

IoT Based Smart Parking Solution

- Smart Parking: Smart Parking is a platform that provides a set of services that enable developers to build IoT applications.
- Smart Parking: Smart Parking is a platform that provides a set of services that enable developers to build IoT applications.
- Smart Parking: Smart Parking is a platform that provides a set of services that enable developers to build IoT applications.

Smart City

- Smart City: Smart City is a platform that provides a set of services that enable developers to build IoT applications.
- Smart City: Smart City is a platform that provides a set of services that enable developers to build IoT applications.
- Smart City: Smart City is a platform that provides a set of services that enable developers to build IoT applications.

Gambar G.4. IoT

Microservices

modernization with flexible and extensible microservices

What We Do

Shorter time-to-market

When different teams can develop their microservices independently, the whole product has fewer roadblocks, and the overall time-to-market decreases.

Improved scalability

When the demand for particular features grows or diminishes, you can scale them up and down separately across multiple servers and providers.

Resilience of operations

As microservices operate independently of each other, one component failing won't shut down the whole product, like it is with monolithic apps, and the faulty module is easy to reboot.

Efficiency of management

Modular software products based on microservices are much easier to deploy, update, and manage.

Ease of product assessment

When monolithic apps are broken into independent pieces, understanding the source code of each microservice is much easier, so developers can assess and update them much faster.

Containers and Microservices based architecture

- Removal of dependencies between teams, resulting in faster code to production
- Multiple initiatives to run in parallel
- Supports multiple technologies/languages/frameworks
- Enables smooth and graceful degradation of service
- Promotes ease of innovation through disposable codes

Professional IT Services & Technology Consulting

Radius approach in implementing DevOps includes in-depth assessment, understanding of requirement and usage of suitable automation tools. Our expertise on blending the attributes of containers in microservices benefits you in keeping business effort at crucial situations.

Accelerate your IT Modernization with RADIUS

If you want to move from a monolithic architecture to microservices, we can assist you. Radius is a software development company, our team of software engineers has enough experience in developing applications with monolithic or microservices architecture. So, whether you have questions about microservices, fill our [contact form](#) and our managers will get back to you within 24 hours.

Contact

Pengembangan website baru direncanakan mencakup penambahan beberapa halaman dan section, seperti:

- Halaman About yang lebih lengkap
- Detail layanan dan solusi perusahaan
- Featured Projects / Success Stories
- Career & Recruitment Page
- Technology Ecosystem / Product Line-Up
- Client Testimonials
- Contact & Consultation Section yang lebih interaktif

Selain itu, beberapa bagian lama yang sudah kurang relevan atau memiliki tampilan outdated akan disederhanakan maupun diperbarui agar website memiliki struktur yang lebih modern, clean, dan mudah dipahami.

Nuansa corporate dan profesional pada website saat ini dinilai sudah cukup baik dalam merepresentasikan identitas perusahaan, termasuk struktur informasi layanan dan company profile yang telah tersedia. Namun, beberapa hal yang ingin diperbaiki antara lain:

- Tampilan UI/UX yang masih terlihat outdated
- Presentasi portfolio proyek yang masih terbatas
- Penjelasan layanan yang belum detail
- Struktur layout dan konten yang kurang konsisten
- Kurangnya penonjolan technology partnership dan enterprise capabilities

- Interaktivitas website yang masih minim

Melalui redesign ini, diharapkan website dapat tampil lebih modern, profesional, informatif, dan mampu memperkuat citra Radius Data Solusi sebagai trusted technology partner di bidang digital transformation dan enterprise solutions.

H. Website Structure and Content

Perencanaan website saat ini diperkirakan akan mencakup sekitar 5–7 halaman utama, termasuk Home, About, Services, Projects, Career, dan Contact. Struktur dasar website serta arah konten sudah tersedia dan sedang dikembangkan lebih lanjut untuk mendukung tampilan company profile yang lebih modern, profesional, dan terorganisir.

Sebagian website copy atau teks konten sudah tersedia dan akan disempurnakan kembali agar lebih konsisten, informatif, serta sesuai dengan branding perusahaan. Materi visual seperti fotografi perusahaan, logo, project assets, dan beberapa elemen desain pendukung juga sudah tersedia untuk digunakan dalam pengembangan website. Selain itu, terdapat kemungkinan penggunaan video company profile atau motion visual sebagai elemen tambahan untuk meningkatkan interaktivitas dan representasi perusahaan secara lebih profesional.
